

Digital Insight™ Solutions Threat Intelligence Program

NCR offers a best of breed, in-depth security approach lead by our world class security team

NCR's security team is composed of seasoned, industry-acclaimed security experts who deliver significant contributions to the industry by setting best practices, conducting certifications, developing white papers, speaking at conferences and influencing the curriculum of some of America's top universities. Members of the security team contributed to initiatives in communities such as:

- PCI
- Cloud Security Alliance (CSA)
- Open Web Application Security Project (OWASP)
- Information Systems Security Association (ISSA)

Because the team is well connected with the security communities worldwide, NCR sometimes hears about zero-day attacks before they are published in the specialized media. NCR is also a contributing member of Financial Services Information Sharing and Analysis Center (FS-ISAC) and partners closely with organizations such as IBM, Intel Security, Guardian Analytics, RSA and the FBI to keep abreast of new threats. Lastly, the security team works closely with NCR's communication team to ensure financial institution clients are kept informed.

NCR's security team monitors and maintains sufficient awareness of cybersecurity threats and vulnerability information so that risk is evaluated and action is taken accordingly. NCR is also engaged in sharing information with other financial institutions and applies proactive blocking controls to defend its clients based on abuse patterns observed in other clients. Points of contact with law enforcement bureaus and regulators have been established as well as a process to respond efficiently.

Digital Insight™ Solutions keep and securely replicate centralized logs of all system transactions to ensure integrity. Logs are analyzed for fraud, intrusion and abuse patterns by internal experts and external partners.
